Projects

Marketing Ad Generator

Developed using Python (2023)

- Built an automated marketing ad generator that generates custom ads based on user inputs.
- Used Python to integrate text and image processing tools to create ad content dynamically for digital platforms.

School Management System

Developed using Laravel (2022)

- Designed and implemented a comprehensive school management system to manage students, staff, and academic records.
- The system includes features for attendance tracking, report generation, and real-time communication between students, teachers, and administrators.

Car Rental Management System

Midlands State University (2023)

- Developed a database management system for managing car rental records using MySQL and Python.
- The system supports data entry, updates, and reporting for student performance.
